

SUMMARY - PROJECT PROPOSAL

Resistance Management of *Helicoverpa armigera* to
Pyrethroids in West Africa

PROJECT SUMMARY

Title: Resistance Management of *Helicoverpa Armigera* to Pyrethroids in West Africa

Duration: Approx. 3 months

Location: Benin, Burkina Faso, Cote d'Ivoire, Guinea, Mali, Nigeria, Senegal and Togo

Nature of Project: Country studies, impact assessment and development of damage control strategies

Brief description: The main objectives of the project proposal are stated to be a quantitative and qualitative analysis of the impact of a major cotton pest against the presently used control techniques throughout the cotton producing countries in West Africa, and the design of a strategy leading to the development of efficient control techniques/methods. The project is proposed to be a regional/country study, implemented by local experts (possibly supported by specialized consultants).

Estimated total cost: USD 30,000

Financing sought from the Fund: USD 30,000
